Aeronautical Engineering | Software Development | Finance

PROFILE

Driven aeronautical engineering undergraduate at Loughborough University with a strong multidisciplinary profile spanning aerospace systems, software development, and financial analysis. Builds real-world engineering projects independently — including an instrumented wind tunnel with computer vision flow analysis and a cross-platform budgeting application. Has completed industry programmes with Rolls-Royce and Airbus, and demonstrates consistent initiative across technical, analytical, and client-facing environments.

EDUCATION

MEng Aeronautical Engineering [Loughborough University](#)

2025 – 2029

- Relevant modules: Flight Mechanics, Structural Analysis, Thermofluids, Computational Methods
- Applying MATLAB for matrix methods, numerical analysis, and engineering data processing

Diploma, Sixth Form [Dartford Grammar School](#)

2023 – 2025

- Subjects: Mathematics, Physics, Computer Science, Economics, English, French

TECHNICAL SKILLS

Aerospace & Engineering

MATLAB, CAD, Free Body Diagrams, Truss Analysis, Static Determinacy, $\LaTeX$

Software Development

Flutter/Dart, Python, Java, Git & GitHub, Relational Databases, Arduino (C++)

Computer Vision & Data

OpenCV (Python), Camera Calibration, Image-based Flow Visualisation

Finance & Analysis

Financial Modelling, Risk Analysis, Capital Allocation, Performance Reporting

Tools & Platforms

Microsoft 365, AccessEvo, SharePoint, VS Code, Overleaf

PROJECTS

Wind Tunnel with Computer Vision Analysis [Personal Engineering Project](#)

2025 – Present

- Designing and building a low-speed wind tunnel instrumented with cameras for aerodynamic flow visualisation
- Integrating an **Arduino** microcontroller for sensor data acquisition including airspeed, pressure, and temperature
- Implementing **OpenCV** in Python to process camera feeds, enabling image-based flow analysis and aerodynamic coefficient estimation
- Applying core aerodynamics knowledge — boundary layer behaviour, flow separation, and wake analysis — to interpret experimental results

SFMe — Student Finance Budgeting App github.com/Labz365/SFMe

2025 – Present

- Contributing to a cross-platform Flutter web app helping UK students model and track Student Finance England disbursements and personal budgets
- Features include a day-by-day budget forecasting engine, authentication flow, surprise payment tracking, and a custom HSL colour-wheel UI widget
- Gaining practical experience in app architecture, state management (Provider), and local data persistence

3D Printer Assistant Robotic Arm Embedded Systems & Mechanical Design

- Designed a robotic arm integrating an **ESP32** microcontroller, Android tablet UI, and servo hardware to automate 3D printer bed interaction
- Applied mechanical design principles to joint geometry, range of motion, and torque requirements; produced a full technical build guide

PROFESSIONAL EXPERIENCE

July 2025 – Present

IT Support Assistant Caremark Tunbridge Wells

- Deliver technical support to 20+ staff, diagnosing and resolving software and system issues to minimise operational downtime
- Led digitisation of paper records into a structured cloud-based filing system, improving retrieval speed and data accuracy
- Manage user accounts, system permissions, and platform access in line with internal data governance policies

Sept 2023 – Sept 2025

Private Mathematics Tutor Self-Employed

- Delivered personalised GCSE and A-Level Mathematics tuition; multiple students achieved target grades
- Designed bespoke lesson plans and self-managed all scheduling, invoicing, and parent communications

INDUSTRY EXPERIENCE & VIRTUAL PROGRAMMES

Jan 2026

Finance Virtual Experience Programme Rolls-Royce plc

- Completed a strategic investment simulation modelling capital allocation and risk exposure across Rolls-Royce's global aerospace and defence business units
- Gained applied insight into performance reporting and financial planning frameworks within a FTSE-listed engineering firm

Jan 2026

Software Engineering Virtual Taster Barclays

- Designed a normalised relational database schema for a productivity application; developed technical reasoning through structured engineering workbooks

May – Dec 2024

Aerospace Virtual Work Experience Airbus

- Completed engineering modules covering aviation safety, propulsion systems, and aircraft design; produced independent research outputs autonomously
